

How to request the services from a messaging app?

- Create an implicit intent for the ACTION_SENDTO capability:

```
Intent smsIntent = new Intent(Intent.ACTION_SENDTO,  
                              Uri.parse("smsto:5556"));
```

- The system finds the applications which have declared to offer this capability.
 - If multiple candidates: the user is asked to choose one.
-
- `smsIntent.putExtra("sms_body", "Hello! Where are you?");`
 - `startActivity(smsIntent);`
